'66-'77 BRONCO RADIATOR WITH 5.0 ENGINE

In the spring I bought/installed a new Ron Davis Radiator for my 69 Camaro with their shroud and dual fans. On Saturday, we drove from Valencia, CA to Huntington Beach, CA (about 80-90 miles). When we left, the outside temp was about 101*, and traffic was stop and go the whole way. Well, I ran the a/c the whole time, and the coolant temp never got above 180*!! On Sunday we went to the "Chevy Madness" show, and then drove home in the late afternoon. Again, we ran the a/c the whole time and the motor never ran hot.

I previously ran one of their competitors aluminum radiators with a single 15" Flex-a-Lite electric puller fan. On hot days I would have to turn off the a/c and the motor would still get up to 220*!!

Anyway, thanks again to Tim and everyone at RDR for making a great product.

Frank

Gentleman,

It was great being able to help you guys with the fit of the RDR Radiator in my '93 Corvette so others may benefit from our experience. Very few people impress me with their knowledge of cars, and you and your team were great. This is probably the best money I've spent on my car. The car now runs at least 20 degrees cooler under any conditions. I wish I'd done it sooner. 199k miles and still COOL!!

Dale Snyder
